

Atividade prática

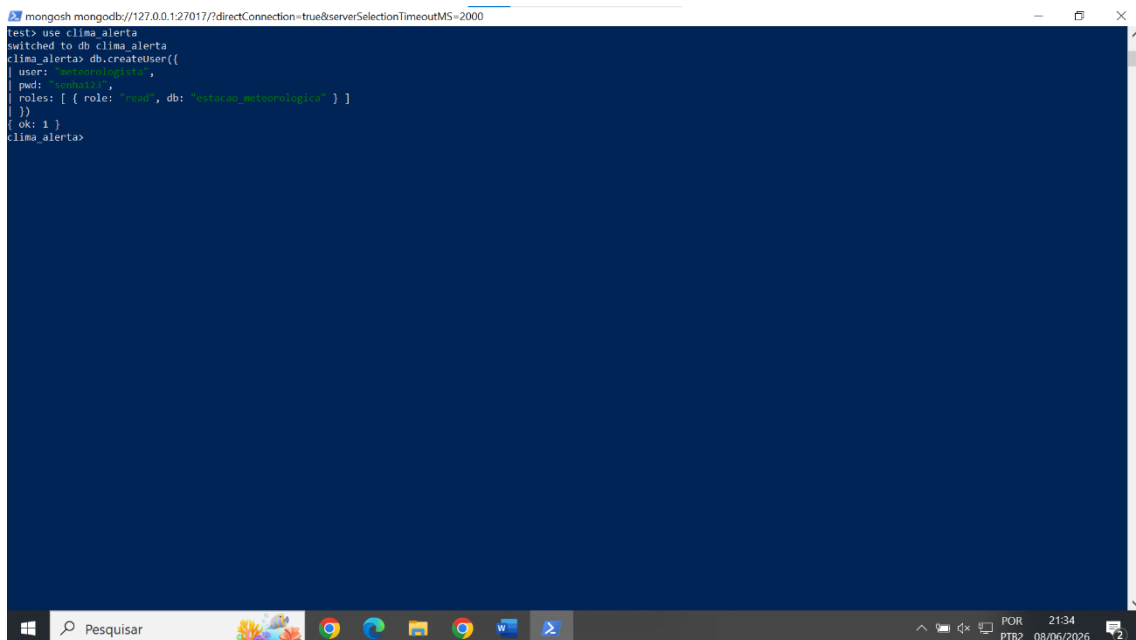

Aula 08

1. Criar usuário devAdm com acesso apenas de leitura.

Código:

```
db.createUser({  
  user: "meteorologista",  
  pwd: "senha123",  
  roles: [ { role: "read", db: "estacao_meteorologica" } ]  
})
```

Print:

```
mongosh mongodb://127.0.0.1:27017/?directConnection=true&serverSelectionTimeoutMS=2000  
[test]> use clima_alerta  
switched to db clima_alerta  
clima_alerta> db.createUser({  
  user: "meteorologista",  
  pwd: "senha123",  
  roles: [ { role: "read", db: "estacao_meteorologica" } ]  
})  
{ ok: 1 }  
clima_alerta>
```

2. Conectar ao banco usando esse usuário.

Código:

```
mongosh --host 127.0.0.1 --port 27017 -u "meteorologista" -p "senha123" --  
authenticationDatabase "clima_alerta"
```

Print:

```
mongosh mongodb://<credentials>@127.0.0.1:27017/?directConnection=true&serverSelectionTimeoutMS=2000&authSource=clima_alerta
PS C:\Windows\system32> mongosh --host 127.0.0.1 --port 27017 -u "meteorologista" -p "senha123" --authenticationDatabase "clima_alerta"
Current Mongosh Log ID: 6a27600966052e2a9dabc113
Connecting to:
  mongodb://<credentials>@127.0.0.1:27017/?directConnection=true&serverSelectionTimeoutMS=2000&authSource=clima_alerta&appName=mongosh+2.8.3
Using MongoDB:
  8.0.5
Using Mongosh:
  2.8.3

for mongosh info see: https://www.mongodb.com/docs/mongosh-shell/

-----
The server generated these startup warnings when booting
2026-06-08T18:45:14.055-03:00: Access control is not enabled for the database. Read and write access to data and configuration is unrestricted
-----

test>
```

3. Exportar a coleção leituras em formato JSON.

Código:

```
& "C:\Program Files\MongoDB\Tools\100\bin\mongoexport.exe" --db
estacao_meteorologica --collection leituras --out "./leituras.json" -u "meteorologista" -p
"senha123" --authenticationDatabase "clima_alerta"
```

Print:

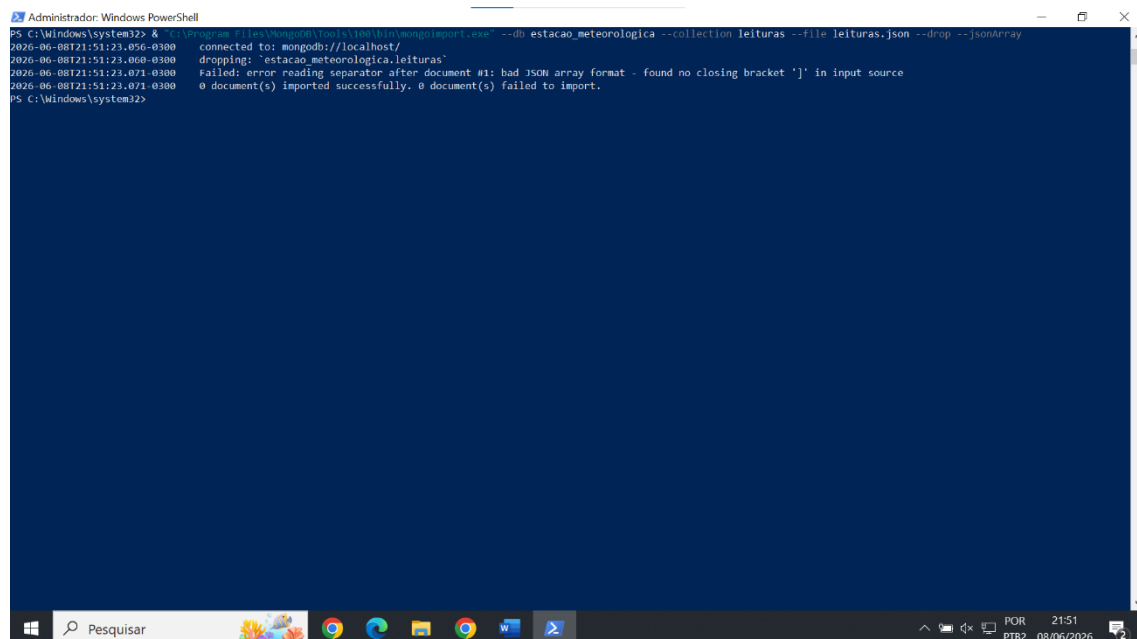

```
Administrador: Windows PowerShell
PS C:\Windows\system32> & "C:\Program Files\MongoDB\Tools\100\bin\mongoexport.exe" --db estacao_meteorologica --collection leituras --out "./leituras.json" -u "meteorologista" -p "senha123" --authenticationDatabase "clima_alerta"
2026-06-08T21:46:47.463-0300    connected to: mongodb://localhost/
2026-06-08T21:46:47.483-0300    exported 0 records
PS C:\Windows\system32>
```

4. Deletar a coleção e restaurar a partir do arquivo JSON

Código:

& "C:\Program Files\MongoDB\Tools\100\bin\mongoimport.exe" --db
estacao_meteorologica --collection leituras --file leituras.json --drop --jsonArray

Print:

```
Administrador: Windows PowerShell
PS C:\Windows\system32> & "C:\Program Files\MongoDB\Tools\100\bin\mongoimport.exe" --db estacao_meteorologica --collection leituras --file leituras.json --drop --jsonArray
2026-06-08T21:51:23.056-0300    connected to: mongodb://localhost/
2026-06-08T21:51:23.060-0300    dropping: 'estacao_meteorologica.leituras'
2026-06-08T21:51:23.071-0300    failed: error reading separator after document #1: bad JSON array format - found no closing bracket ']' in input source
2026-06-08T21:51:23.071-0300    0 document(s) imported successfully, 0 document(s) failed to import.
PS C:\Windows\system32>
```

5. Testar a conexão com Mongoose e capturar logs.

Código:

```
import mongoose from "mongoose";
```

```
const url =
```

```
"mongodb://meteorologista:senha123@127.0.0.1:27017/estacao_meteorologica?authSource=clima_alerta";
```

```
mongoose
```

```
.connect(url)
```

```
.then(() => {
```

```
  console.log("\nConexão bem sucedida");
```

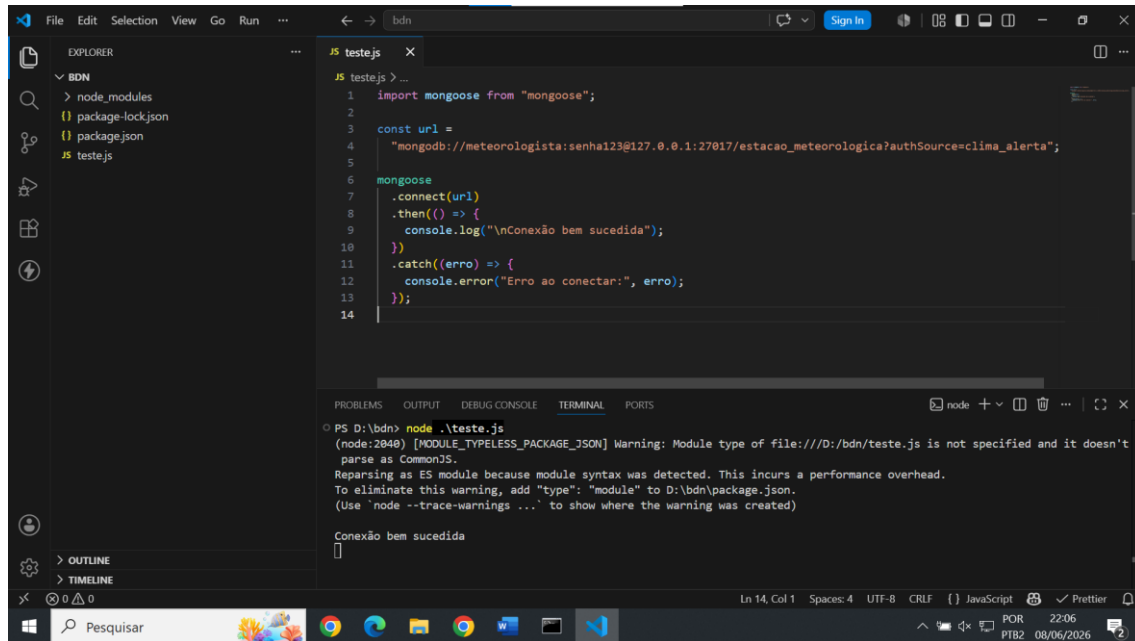

```
})
```

```
.catch((erro) => {
```

```
  console.error("Erro ao conectar:", erro);
```

```
});
```

Print:

The image shows a screenshot of the Visual Studio Code editor interface. The Explorer panel on the left shows a project named 'BDN' with files 'node_modules', 'package-lock.json', 'package.json', and 'teste.js'. The main editor window displays the content of 'teste.js', which is a JavaScript file using the Mongoose library to connect to a MongoDB database. The code is as follows:

```
1 import mongoose from "mongoose";
2
3 const url =
4   "mongodb://meteorologista:senha123@127.0.0.1:27017/estacao_meteorologica?authSource=clima_alerta";
5
6 mongoose
7   .connect(url)
8   .then(() => {
9     console.log("\nConexão bem sucedida");
10  })
11  .catch((erro) => {
12    console.error("Erro ao conectar:", erro);
13  });
14
```

The bottom panel shows the 'TERMINAL' output, which displays a warning from Node.js about the module type and the successful connection message:

```
PS D:\bdn> node .\teste.js
(node:2840) [MODULE_TYPELESS_PACKAGE_JSON] Warning: Module type of file:///D:/bdn/teste.js is not specified and it doesn't
parse as CommonJS.
Reparsing as ES module because module syntax was detected. This incurs a performance overhead.
To eliminate this warning, add "type": "module" to D:\bdn\package.json.
(Use 'node --trace-warnings ...' to show where the warning was created)

Conexão bem sucedida
```

The status bar at the bottom indicates the current file is 'teste.js' at line 14, column 1, using UTF-8 encoding and CRLF line endings. The language is set to JavaScript and the formatter is Prettier. The system tray shows the date and time as 08/06/2026, 22:06.
